Comparing
Quantities

Comparing Quantities

9/8

#1 Bartering - Starts: w/ 2 sheep + goat

Goal: corn

Can trade: 1 salt = 2 chicken

7 corn = 3 salt

6 chickens = 1 goat

6 salt = 1 sheep

Other combos: 12 salt = 2 sheep

8 corn = 12 salt

~~1 goat = 6 salt~~

6 chicken = 3 corn

Steps: 2 sheep + 1 goat

12 salt + 1 goat

8 corn + 1 goat

8 corn + 6 chickens

8 corn + 3 salt

8 corn + 2 corn

= 10 corn

Paulo gets 10 bags of corn for 2 sheep and 1 goat.

Comparing Quantities

Q2

9/8

#2) Bananas Pan Balance - Combs - 10 bananas = 2 pineapples
1 pineapple = 2 bananas
1 apple = (?) banana

Work -

$$10b = 1p$$
$$5 \text{ bananas} = 1 \text{ pineapple}$$
$$2b + a = 1p$$
$$2b + a = 5b$$
$$a = 3b$$

One apple equals three bananas.

#3 Combs - 6 carrots = 1 corn + 1 pepper
1 corn = 2 peppers
1 pepper = (?) carrots

explained

Work

$$6ca = 1c + p$$
$$6ca = 2p + p$$
$$6ca = 3p$$
$$2ca = 1p$$

2 carrots equal one pepper

Comparing Quantities

pg 2

or cups 9/8

#4 - Thirst Quenchers - Combos - 6 mugs = 1 glass + 1 plate

$$2g = 1p$$

Also Note
 $4p = 1b$

$$\text{Work} = 6m = 1g + 1p$$

$$6m = 1g + 2g$$

$$6m = 3g$$

$$2m = 1g$$

$$16m = 8g$$

$$16m = 4p$$

$$4p = 1b$$

$$16m = 1b$$

16 mugs or cups equals the big bottle.

#5 - Tug-of-War - Combos - 4 oxen = 5 horses

$$1 \text{ elephant} = 1o + 2h$$

Goal: Which is stronger

$$1e + 3h \text{ vs } 4b$$

$$1b = 4g$$

$$\text{Work: } 1e + 3h = 4b$$

$$1o + 2h + 3h = 4b$$

$$1o + 5h = 4b$$

$$1o = 0$$

The left side is stronger by the power of 1 oxen. This is because if you change the elephant you have 1 oxen and five horses against 4 oxen. Five horses equal 4 oxen so they are removed leaving 1 oxen on the left.

Comparing Quantities

p 9

#6 Info

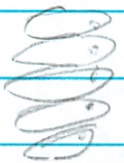

$$5 \text{ fish} = 2 \text{ mellons}$$

$$4 \text{ apples} = 1 \text{ bread}$$

$$1 \text{ m} = 1 \text{ corn} + 2 \text{ a}$$

$$10 \text{ a} = 4 \text{ m}$$

#6 Draw picture of above info

 = 	 = 	 =  + 
 = 		
 = 		
 = 		

#7 Skipped

#8 Is $10 \text{ a} = 10 \text{ f}$ ^{tree?} Yes

$$\text{Work} = 10 \text{ a} = 4 \text{ m}$$

$$4 \text{ m} = 10 \text{ f}$$

Yes, it is correct.

#9 Is $3 \text{ f} = 1 \text{ b}$ true?

$$\text{Work: } 3 \text{ f} = ?$$

No, she can't trade fish 3 fish

#10 Goal: Get corn from fish

$$\text{Work: } 5 \text{ f} = 2 \text{ m}$$

$$2 \text{ m} = 1 \text{ c} + 2 \text{ a}$$

She can trade 5 fish for 2 mellons, and trade the 2 mellons for 2 ears of corn and 4 apples.

Comparing Quantities

p5

9/9

Section B

#1-16# The School Store - Facts: Eraser = 25¢
Pencils = 15¢

#1 The School Store \$1.10 was bought

Answer 2 erasers = 50¢
4 pencils = 60¢
Total = \$1.10

#2 \$1.50 was bought, They can't decide what was bought

Answers 6 erasers \$1.50 or
10 pencils \$1.50 or
5 pencils + 3 erasers \$1.50

Real answer: They can't decide what was bought because there are three possible answers.

#3 Find another amount where you don't know what was bought?

Answer: 75¢ - 3 erasers or 5 pencils

\$1.75 - 5 pencils or 4 erasers

75¢ is a number that can be multiple answer

Comparing Quantities

0/0

06

#4 Complete the chart

Eraser	Price	Pencils	Price
0	\$0	0	\$0
1	\$.25	1	\$.15
2	\$.50	2	\$.30
3	\$.75	3	\$.45
4	\$1.00	4	\$.60
5	\$1.25	5	\$.75
6	\$1.50	6	\$.90
7	\$1.75	7	\$1.05

#5 \$1.05

The box could have 7 pencils and no erasers.

6 How do you put both data in one chart?

A. You can make a graph.
 B. But that won't work you could only show one.

A. Why not start in the upper corner and work like this:

Pencil
 150¢
 45¢
 15¢

B. That's something like a combination chart, but the data starts in the other corner.
 A. That's a good idea, I'll try that.

cont on 2nd

Work

~~50 f = 10 m~~

~~10 m = 10 c + 20 a~~

~~10 c + 20 a = 10 m + 30 c~~

~~25 c + 20 a = 10 m + 30 c~~

~~18 c + 20 a = 10 m + 30 c~~

100 f

26 m

20 c + 40 a

20 c + 4 m

24 c + 8 a

12.5
25
37.5

~~50
67.5
75~~

Answer:

10 f = 4m

4m = 4c + 8a

4m = 10c

10f = 10a

4a = 8c

10a = 4c + 8a

2a = 4c

1m = 1c + 4c

1m = 5c 5c = 10c

10 f = 10m

10m = 10c + 32a

9c + 16a = 8c

30c = 12m

12m = 12c + 40a

60

25

10m = 10 + 20a

10c + 8m

18c + 16a

Comparing Quantities

9/10

#7

#7 The School Store - Pencils cost 15¢, Erasers 25¢

A. What does 40 mean on chart?

Answer: 40 means 40¢ was paid for one pencil + eraser.

B. On the top chart how many can the fit.

They can only fit 16 on the small chart, it needs to be bigger.

#8. See Student Activity sheet 1.

#9 See Student Activity sheet 1.

+ 25

+ 15

+ 10 ↗ + 40

Comparing Quantities

p8

9/10

#10 The School Store - Pencils 15¢, Erasers 25¢

A# Where is 110¢ on chart

It is right above the circled block.

B. How many erasers or pencils for 110¢.

It is 2 erasers and 4 pencils.

#11

A. When you move diagonally left on the chart, what is the increase?

The number increases by 40¢, when it moves diagonally left.

B. Is the answer to 11A different depending on each arrow?

No there is no difference.

#12 What does moving along an arrow mean in terms of pencils + eraser purchased.

It means that different amount has been purchased, either more or less.

Comparing Quantities

d/10

p 8

#13 The school store

A: Mark on your chart (Student Activities Sheet 1) a move that represents the exchange of one pencil for an eraser.

Answer: See Student Activity Sheet 1

B: How much is that cost?

The cost is 10¢.

#14

A: Mark on the chart (Student Activity Sheet 1) a move for giving one eraser for two pencils.

See Student Activity Sheet 1

B: How much does that cost?

It costs 5¢ for the move.

#15

A: Describe the move shown on chart A (Comparing Quantities page 8)

The move is giving up an eraser and getting a pencil.

Comparing Quantities

p8

9/10

#15 The School Store

B. Describe the move on chart B (Comparing Quantities p8)

The move is giving a pencil and getting 2 erasers.

24-25 Renting Canoes - Facts

small carries 2

large carries 3

#124 25 people are going. What are the possibilities?

Work: See Student Activity Sheet 2

Answer: The 25 people can rent 11 small and 1 big, or 8 small and 3 big, or 5 small and 5 big, or 2 small and 7 big.

#125 24 people are going now.

Work: See Student Activity Sheet 2

Answer: The 24 people can fit in 12 small and 0 big, or 9 small and 2 big, or 6 small and 4 big, or 3 small and 6 big, or 0 small and 8 big.

Comparing Quantities

p 13

9/11

26 Puzzles

A Complete puzzle on Student Activity Sheet 3

Explanation: Going left is $+5$, you can tell by $0-5$. Now you know that going up is $+8$. You now fill in the other boxes, 24 is the answer.

B. Explanation: You can tell from the 27 and 37 that going up is $+10$. You then extend and add 10 and 20. You can now see from the 20 and the 27 that going right is $+7$. Now you can go right to find the circle which is 21.

C Explanation: I started with the 20 and the 24 to see that going diagonal up left means you subtract 4. Then I got the 12. I then divide the 12 by 4 because there is 4 spaces under it. I then figured out that going up, you add 3. I then saw from the 9 and the 16 that going right is $+7$. Then from the 28 I went up by 3 to get 34 as the answer.

Comparing Quantities

9/11

p 13

#26 Puzzle - Student Activity Sheet 3

10 + Explanation: I found that 33 and 55 when going on a 2 right, one down diagonal you add 20. Then I had 75 and 5 spaces to move, so I figured that you need to move -15 when you go left. Then from 45 and 55 I saw that going up is +10, then let me fill in the rest of the chart going up from 60, to get 90 as the answer.

Comparing Quantities

p 33

9/11

~~Flash Forward~~

#14 School Fair - Loop - Loop five tickets
Whirlybird 2 tickets

#1 Make chart

		Number of Tickets									
# of	7	14	19								
	6	12	17

	0	0	5	10	15	20	25	30	35		
		0	1	2	3	4	5	6	7		

Loop Rides

#2 How many for 2 Loop and 3 whirlybird?

16 tickets are needed, 2

#3 How can you spend exactly 19 tickets

You can do 7 Whirlybird and 1 Loop rides, or 2 Whirlybirds and 3 Loop Rides for 19 tickets

Combination Chart

9/11

Flash
For word

#4 School Fair

A. Mark on the chart giving Wirly bird for 2 Loop.

See Chart

B. What is the ticket chart?

You need 8 more tickets.

Comparing Quantities

PLS

#1-3

Glasses = 6

2g + 1s = \$50

Shorts = 5

1g + 3s = \$50

$$2g + 1s = 1g + 3s = 50$$

$$1g = 2s =$$

#1.

What is more expensive?

1 pair of glasses is the same as 2 pairs of shorts. This means that glasses are more expensive because 1 pair of glasses equals 2 shorts.

#2 How many shorts for \$50?

5 shorts, because 1 pair of glasses and 3 shorts are \$50. Also 1 pair of glasses equals 2 shorts. Exchange and get 5 shorts for \$50

#3 Price of g?

\$20, because $5g = \$50$, so $1g = \$10$ and $2g = \$20$, $2g = 1g$, so $1g = \$20$

Comparing Quantities

		# of Glasses						

Glasses = \$20

Shirts = \$10

Comparing Quantities p/c

#4-7

$$2u + 1c = \$88$$

$$1u + 2c = \$76$$

1u = ^{price of} umbrella

1c = 1 cap

$$2u + c \text{ @ } 1u + 2c$$

$$2u + c = 1u + 2c + \$4$$

$$1u = 1c + \$4$$

$$1c = \$24$$

$$1u = \$28$$

#4 What is more expensive.

An umbrella is more expensive because 1 umbrella is the same as a cap and \$4 dollars. So 1 umbrella is \$4 more than a cap. (on balance)

#6 Make a group of caps + find price

$$1u + 2c = 76\$$$

$$1c + \$4 + 2c = 76\$$$

$$\$4 + 3c = \$76$$

$$3c = \$72$$

$$1c = \$24$$

3 caps is the same as \$72

#7 What is price for 1 cap or umbrella

A cap is \$24 and an umbrella is \$28.

12					

Salad = \$2.00
 Taco = \$1.50
 Drink = \$0.75

A Cost of salad

A salad cost \$2.00

B Cost of taco and drink.

A taco cost \$1.50 and a drink cost 75¢.

Section A. Compare and Exchange

Susan and her friends like to collect and trade basketball cards. Today after school, Susan made the following trades:

- two Slamming Sams for three Halima Hoopsters,
- three Fast Break Freddys for four Slamming Sams,
- one Fast Break Freddy for one Slamming Sam and two Rebound Ritas,
- four Jumping Jeans for two Fast Break Freddys.

Use the above information to make up two more fair card trades.

- James offers Susan six Halima Hoopsters for three Fast Break Freddys. Should Susan make this trade? Why or why not?
- James then offers one Jumping Jean for two Slamming Sams. Should Susan make this trade? Why or why not?
- Susan has five Fast Break Freddys. How many Rebound Ritas can she get for her Fast Break Freddys?

Section B. Looking at Combinations

For each of the following puzzles, find the number that goes in the circled box and explain your strategy.

a.

○				
	10	18		
0				

b.

	51			
			○	
		27		
0				

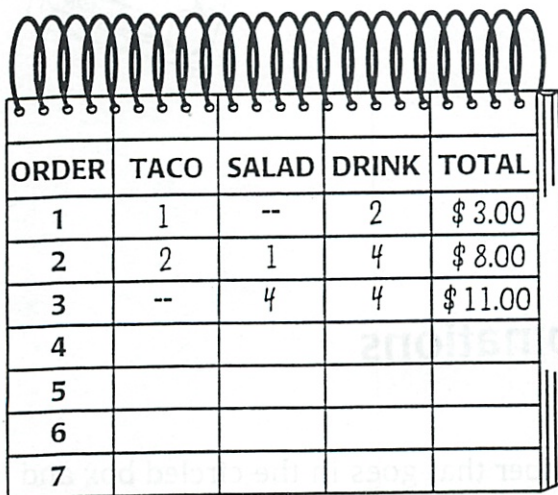

Section C. Finding Prices

#6
Rob bought three T-shirts and four caps for \$96. Anne bought two T-shirts and five caps for \$99.

- Make a combination chart to represent this information. Be sure to label the horizontal and vertical sides of your chart.
- What is the price of one T-shirt? one cap?

Section D. Notebook Notation

Study the following notebook showing lunch orders at Gino's restaurant.

ORDER	TACO	SALAD	DRINK	TOTAL
1	1	--	2	\$ 3.00
2	2	1	4	\$ 8.00
3	--	4	4	\$ 11.00
4				
5				
6				
7				

- 7
- Find the cost of one salad. Explain how you got your answer.
 - How can you find the cost of one drink? one taco?

Section A. Compare and Exchange

Comparing Quantities

p27

9/24

#1-5 School Store Revisited - $2E + 3P = 130$

See Student Activity Sheet 5

#1 What does $2E + 3P = 130$ mean?

E = price of one eraser in cents

2 = # of erasers

P = price of

one pencil

in cents, 3 = # of pencils, 130 = price in cents

for 2 erasers and 3 pencils

$2e$ means two erasers, $3p$ means 3 pencils, and 130 means 130 cents

#2 What # in circle? Write equation

The # is 230, Equations - $4E + 6P = 260$

#3 See Student Activity Sheet 5

#4 See Student Activity Sheet 5

#5 $1p = ?$, $1e = ?$

One pencil costs 20¢ and an eraser is 35¢

Comparing Quantities

9/24

6-8 Hats + Glasses - p28

$$3H + 2G = 54.50$$

$$2H + 3G = 50.50$$

#6 Write equations

H = price of hat
G = price of glasses

$$3H + 2G = 54.50$$

$$2H + 3G = 50.50$$

#7 $1H + 4G = ?$ Work:

$$3H + 2G = 54.50 \rightarrow \times 3 \rightarrow 9H + 6G = 163.50$$

$$2H + 3G = 50.50 \rightarrow \times 2 \rightarrow 4H + 6G = 101$$

$$5H = 62.50$$

$$1H = 12.50$$

Since $H = 12.50$

Then $2H = 25$

$$2H + 3G = 50.50$$

$$25 + 3G = 50.50$$

$$3G = 25.50$$

$$1G = 8.50$$

Check

$$3H + 2G = 54.50$$

$$2H + 3G = 50.50$$

$$1H + 4G = 46.50$$

$$5G = 42.50$$

$$1G = 8.50$$

$$1H = 12.50$$

5H	62.5
4H	50.0
3H	37.5
2H	25.0
1H	12.5

$$12.50 + (8.50 \times 4) = ?$$

$$12.50 + 34 = 46.50$$

$$1H + 4G = 46.50$$

#8 one hat is 12.50, and a pair of glasses is 8.50

Comparing Quantities

p 32

9/19

Flash
Forward

$$\begin{aligned} \#20-21) \quad 4L + 3M &= 96 \\ L + M &= 27 \end{aligned}$$

#20 what is L and what is M?

$$\begin{array}{r} 4L + 3M = 96 \\ - (L + M = 27) \\ \hline 3L + 2M = 69 \\ \xrightarrow{-2} \\ 3L + 3M = 81 \\ \xrightarrow{-1} \\ \underline{L = 15} \end{array}$$

$$\begin{array}{r} 2 \\ 27 \\ \times 2 \\ \hline 81 \end{array}$$

$$L + M = 27$$

$$15 + M = 27$$

$$\underline{M = 12}$$

The L is 15, and an M is 12.

#21 Make a story

There are 2 tables at an expensive restaurant. Table one orders 4 large pasta dishes and 3 small. The other table orders just 1 large and 1 small. Find the price of each item.

Equations

# Graphing Equation

10/7

#1-2 See Student ^{p2} Activity Sheet 1

#1 Is saying that the fire is NW, ^{of A} specific?

No, because with the lines I drew on sheet 1, show the fire could be anywhere in that line.

They ^{need} ~~could~~ tell how far away, ~~and the exact degree~~ if they ^{if they} wanted to be more precise, ~~even if it was exact NW,~~ you could still not know where it is.

2. ~~No~~ Now you can tell exactly where the fire is, it is at the point where the two lines meet. This is indicated at the pink dot on sheet 1

# Graphing Equations

p3

10/7

3.

A. NE equals  $45^\circ$   
SE =  $135^\circ$

B. Opposite - NE = SW  
Opposite SE = NW

C. SW =  $225^\circ$   
NW =  $315^\circ$

4. I would recommend degrees because that it is more exact than simple directions.

# Graphing Equations

10/7

p4

#5b See Student Activity Sheet 2

#5 See Student Activity Sheet 2

The orange circle is where the fire is located.

#6 See Student Activity Sheet 2

The blue circle is where the 2nd fire is located

# Graphing Equations

10/7

#7⁹ See Student Activity Sheet 3

#7 See Sheet 3

A

They know some thing is wrong because all 3 lines never all meet.

B.  $231^\circ$  is the correct measurement for tower 5

#8

No, the reports are not possible, the lines never meet.

# Graphing Equations

10/7

p 6

#9

A Opposite  $30^\circ$  is  $210^\circ$  or  $270^\circ$

B.  $310^\circ$  is shown, opposite is  $130^\circ$   
T  
or WNW

a. Distance between A+B = 10km

" " " " C+D = 15km

b. O is half way between A+B.

# Graphing Equation

p4

10/8

# 2-4 Notes:

Ordered pair: 1st # is horizontal coordinate (x), 2nd # is vertical coordinate (y) or  $(x, y)$

So  $F = (10, 15)$  (see worksheet)

# 2.  $\frac{1}{2}$  way between  $C$  &  $F = (5, 15)$

# 3. What are coordinates?:

A 10 km west of B =  $(-10, 5)$

B 15 km east of A =  $(15, -5)$

C 15 km west of A =  $(-15, -5)$

# 4 B =  $(0, 5)$  - what are the rest?

A =  $(0, -5)$   
C =  $(0, 15)$

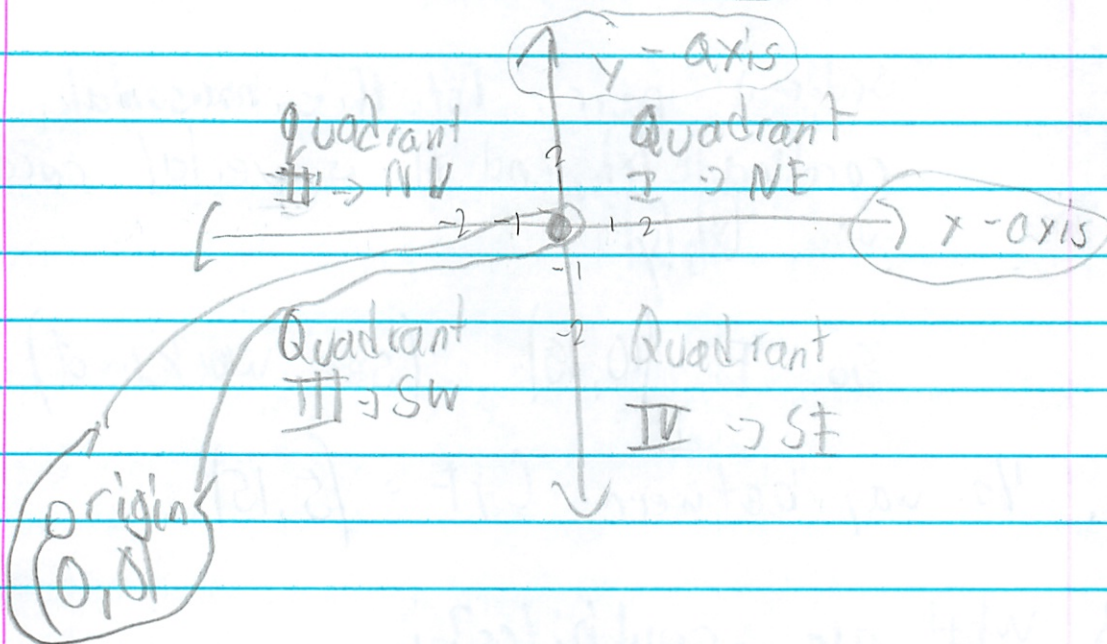

B =  $(0, 0)$

# Graphing Equations p/8

10/8

#5-7

## Coordinate System

#5 Quadrant 3 or the SW quadrant is in double negative pairs.

#6  $(-20, -5)$  is 20 km west of point B.

#7  $F = (10, 15)$

A  $A = 2^\circ$   
 $B = 45^\circ$   
 $C = 90^\circ$

B  $G = (5, 10)$

C  $A = 19^\circ$   
 $B = 45^\circ$   
 $C = 135^\circ$

# Graphing Equations

p11

0/8

#9 River

A:  $(-18, 20)$ ,  $(20, -7)$  is where the river disappears

B  $(0, 1.5)$  is where the river crosses the y-axis  
 $(7, 8)$  " " " " " " x-axis

#9 Fire is moving south

- A
- 1km =  $(10, 14)$
  - 2km =  $(10, 13)$
  - 3km =  $(10, 12)$
  - 13km =  $(10, 2)$

B The x coordinate always stays the same because the fire is moving up or down, not east to west

#10 The wind

#10 The wind is going east or west.

# Graphing Equations

10/8

p 12

#11  $x=10$  describe a line that is 10 km east of the origin. It is like taking the x-axis and adding 10.

B 5 km north of 0 is  $y=5$

#12  $x=-5$  is the line of A (5 km of y-axis)

B)  $y=5$  is a horizontal line of C (5 km n. of x-axis)

AB

A see Student Activity Sheet 4

B  $x=16$  is the longest firebreak at 10.5 km  
 $y=8$

10/15

Revised

#8 I should do the same thing and label each point, I should also extend the line out past where they intersect and add an arrow. I could also do this

#9 I should mention a ratio.

$$\textcircled{a} \quad \frac{x}{y} = \frac{2}{3} \quad \frac{-6}{9} \rightarrow \frac{-2}{3} \quad \frac{-8}{12} \rightarrow \frac{-2}{3}$$

#10 I could have just put multiples like

- [2, 3]    - [16, 24]
- [4, 6]    - [5, 75]

label on map

#11 I could have figured it by ratios.  $\textcircled{1}$

#12 Same as #10, I could have multiples of this

Could you do this:

$\textcircled{1}$

Ratio is comparison of 2 numbers.  
R218 PD61d/6/03

boys to girls

$$\frac{b}{g} = \frac{b}{g} = \frac{b}{g}$$

 6. ) skipped

P 25

7. Starting point  $(0, 5)$  and a 100 horizontal steps of +1  
 you get  $x = 100$  and  $x = 2 \times 100 + 5 = 205$

A Write a rule for 75 horizontal steps of +1	Starting point $(0, 5)$	Starting point $(0, 5)$
$x = 75$	$x = 75$	$x = 75$
$y = 75 \times 2 + 5 = 155$	$y = 75 \times 2 + 3 = 147$	$y = 75 \times 2 + 3 = 147$

B. 175 horizontal of +1	↳ Same
$x = 175$	$x = 175$
$y = 175 \times 2 + 5 = 355$	$y = 175 \times 2 + 3 = 347$

C $3\frac{1}{2}$ horizontal of +1	↳ Same
$x = 3\frac{1}{2}$	$x = 3\frac{1}{2}$
$y = 3\frac{1}{2} \times 2 + 5 = 12$	$y = 3\frac{1}{2} \times 2 + 3 = 4$

#8A The formula  $y = 5 + 2x$  means  $5$  is added to 2 times the value of  $x$

B  $y = 5 \times (3) + 5 = -10$ . It should work.

# Graph Paper

1/5

#1  $y = \frac{2}{3}x - 4$

If  $x$  equals 3 then  $y = \frac{2}{3}x(3) - 4$   
 $y = 2 - 4$   
 $y = -2$

Need to do 3 of these

$(3, -2)$

If  $x$  equals -3 then  $y = \frac{2}{3}x(-3) - 4$   
 $y = -2 - 4$   
 $y = -6$

Order Pairs Not Slope

$(-3, -6)$

If  $x$  equals 0 then  $y = \frac{2}{3}x(0) - 4$   
 $y = 0 - 4$   
 $y = -4$

$(0, -4)$

$y = \frac{2}{3}x - 4$

(m) slope where the line crosses the y axis (b)

#2  $y = 2x + 3$

$x = 2$  then  $y = 2 \cdot 2 + 3$   
 $y = 4 + 3$   
 $y = 7$   
 $(2, 7)$

# Graph Paper Cont

11/5

$x = 0$  then  $y = 2 * 0 + 3$   
 $y = 0 + 3$   
 $y = 3$   
 $(0, 3)$

y-intercept = y coordinate of the point where the line crosses the y-intercept

$x = 1$  then  $y = 2 * 1 + 3$   
 $y = 2 + 3$   
 $y = 5$   
 $(1, 5)$

(or) you could do is  $y = 2x + 3$

Need  $\rightarrow$   $m = 2$   $\leftarrow$  slope  $m$   
 $b = 3 \rightarrow$  y-inter  $(0, 3)$

$y =$   
 slope

3.  $y = -\frac{2}{3}x - 1$

$m = -\frac{2}{3}$   
 $b = -1 \rightarrow (0, -1)$

4.  $y = -2x + 6$

$m = -2$   
 $b = 6 \rightarrow (0, 6)$

 $-7k = 7$   
 $\frac{-7k}{-7} = \frac{7}{-7}$   
 $k = -1$

Check 9  $-5k + 3 = 2k + 10$   
 $-5(-1) + 3 = 2(-1) + 10$   
 $5 + 3 = -2 + 10$   
 $8 = 8$

#10  $3m - 12 = 24 - 6m$   
 $3m + 6m - 12 = 24 - 6m + 6m$   
 $9m - 12 = 24$   
 $9m - 12 + 12 = 24 + 12$

$\frac{9m}{9} = \frac{36}{9}$   
 $m = 4$

#11  $2n + 8 = -3n - 15$   
 $2n + 3n + 8 = -3n + 3n - 15$   
 $5n + 8 = -15$   
 $5n + 8 - 8 = -15 - 8$   
 $5n = -23$   
 $\frac{5n}{5} = \frac{-23}{5}$   
 $\frac{5n}{5} = -4.6$

Check 11  $2n + 8 = -3n - 15$   
 $2(4.6) + 8 = -3(4.6) - 15$   
 $-9.2 + 8 = 13.8 - 15$   
 $-1.2 = -1.2$

#12  $6p + 11 = -6p - 5$   
 $6p + 6p + 11 = -6p + 6p - 5$   
 $12p + 11 = -5$   
 $12p + 11 - 11 = -5 - 11$   
 $12p = -16$   
 $\frac{12p}{12} = \frac{-16}{12}$   
 $p = -\frac{1}{3}$

#13  $\frac{2}{3}q + 5 = 9 + 9$   
 $\frac{2}{3}q - \frac{2}{3}q + 5 = 9 - \frac{2}{3}q + \frac{2}{3}q + 9$   
 $5 = \frac{1}{3}q + 9$   
 $5 - 9 = \frac{1}{3}q + 9 - 9$   
 $-4 = \frac{1}{3}q$   
 $-12 = q$

See Work  
Sheet for Rest

# Graphing Equations

## Quiz Review

11/21

Quiz #s	Review #
#1-4	#1-4
#5	#5
#6	#7
#7 w/check	#6
#8	#8
#9	#9
#10 w/check	#11, 12
#11, 12	see below

### Quiz #11

means check

W/out solving show and explain if  $w=3$  is the solution.

$$4w+1 = -2w+19$$

$$4(3)+1 = -2(3)+19$$

$$12+1 = -6+19$$

$$13 = 13$$

Need

↓

$w=3$  is the solution because when I checked we came up w/ a true statement.

### #12

write a 2 step equation whose solution is  $q=7$

(Like 5, 6, 7)

$$q=7$$

$$7q=49$$

$$7q+2=49+2$$

$$7q+2=51$$

# Graphing Equations

## Review 2 worksheet

#1  $-5 + w = -11$   
 $-5 + 5 + w = -11 + 5$   
 $w = -6$

#2  $-11 = w - 8$   
 $-11 + 8 = w - 8 + 8$   
 $-3 = w$

#3  $-128 = 8w$   
 $\frac{-128}{8} = \frac{8w}{8}$   
 $-16 = w$

#4  $\frac{w}{-4} \times \frac{-4}{1} = 8 \times -4$   
 $w = -32$

#5  $-6 + 4w = -34$   
 $-6 + 6 + 4w = -34 + 6$   
 $4w = -28$   
 $\frac{4w}{4} = \frac{-28}{4}$   
 $w = -7$

Check #5  $-6 + 4w = -34$   
 $-6 + 4(-7) = -34$   
 $-6 - 28 = -34$   
 $-34 = -34$

#6  $18 - 5w = -12$   
 $18 - 18 - 5w = -12 - 18$   
 $-5w = -30$   
 $\frac{-5w}{-5} = \frac{-30}{-5}$   
 $w = 6$

#7  $11 - \frac{w}{4} = -1$   
 $11 - 11 - \frac{w}{4} = -1 - 11$

#7 cont |  $-\frac{w}{4} = -12$   
 $-\frac{w}{4} \times \frac{-4}{1} = -12 \times -4$   
 $w = 48$

#8 |  $3w - 7 = 4w - 12$   
 $3w - 3w - 7 = 4w - 3w - 12$   
 $-7 = w - 12$   
 $-7 + 12 = w - 12 + 12$   
 $5 = w$

#9 |  $-4w + 3 = 2w + 21$   
 $-4w + 4w + 3 = 2w + 4w + 21$   
 $3 = 6w + 21$

$3 - 21 = 6w + 21 - 21$   
 $-18 = 6w$   
 $\frac{-18}{6} = \frac{6w}{6}$   
 $-3 = w$

Check 9 |  $-4w + 3 = 2w + 21$   
 $-4(-3) + 3 = 2(-3) + 21$   
 $12 + 3 = -6 + 21$   
 $15 = 15$

#10 |  $3w - 18 = 30 - 5w$   
 $3w - 18 + 18 = 30 + 18 - 5w$   
 $3w = 48 - 5w$   
 $3w + 5w = 48 - 5w + 5w$   
 $8w = 48$   
 $\frac{8w}{8} = \frac{48}{8}$   
 $w = 6$

#11 |  $2w + 10 = -3w - 20$   
 $2w + 10 + 20 = -3w - 20 + 20$   
 $2w + 30 = -3w$   
 $2w - 2w + 30 = -3w - 2w$   
 $30 = -5w$   
 $\frac{30}{-5} = \frac{-5w}{-5}$   
 $-6 = w$

#12 |  $4w + 7 = -4w - 49$   
 $4w + 4w + 7 = -4w + 4w - 49$   
 $8w + 7 = -49$   
 $8w + 7 - 7 = -49 - 7$   
 $8w = -56$   
 $\frac{8w}{8} = \frac{-56}{8}$   
 $w = -7$

#13 |  $\frac{3}{4}w + 1 = \frac{1}{2}w - 2$   
 $\frac{3}{4}w - \frac{1}{2}w + 1 = \frac{1}{2}w - \frac{1}{2}w - 2$   
 $\frac{1}{4}w + 1 = -2$   
 $\frac{1}{4}w + 1 - 1 = -2 - 1$   
 $\frac{1}{4}w = -3$   
 $\frac{1}{4}w \times 4 = -3 \times 4$   
 $w = -12$

#14 |  $-6w - 5 + 2w = -37$   
 $-6w + 2w - 5 = -37$   
 $-4w - 5 = -37$   
 $-4w - 5 + 5 = -37 + 5$   
 $-4w = -32$   
 $\frac{-4w}{-4} = \frac{-32}{-4}$   
 $w = 8$

# Graphing Equations

p41

12/1

H

$$y = -5 + 2x$$

$$y = 15 - \frac{1}{2}x$$

A: To find that the chart is correct you can check or do it again.

B: The fire is about at point (8, 11)

C: You can check by Solving equations:

Solve

$$-5 + 2x = 15 - \frac{1}{2}x$$

(See 11/18 Notes)

$$-5 + 5 + 2x = 15 + 5 - \frac{1}{2}x$$

$$2x = 20 - \frac{1}{2}x$$

$$2x + \frac{1}{2}x = 20 - \frac{1}{2}x + \frac{1}{2}x$$

$$2\frac{1}{2}x = 20$$

$$\frac{2\frac{1}{2}x}{2.5} = \frac{20}{2.5}$$

$$x = 8$$

$$20 \div 2.5$$

$$\frac{20}{1} = \frac{8}{1}$$

$$\frac{40}{1} \times \frac{2}{5} = 8$$

$$x = 8, y = 11$$

$$8, 11$$

Check

$$y = -5 + 2x$$

$$y = -5 + 2(8)$$

$$y = -5 + 16$$

$$y = 11$$

# Graphing Equations

12/1

p42  
#5

$$y = 15 - x$$

$$y = 5 + 4x$$

A  $y = 15 - x = C$   
 $y = 5 + 4x = B$

B  $15 - x = 5 + 4x$   
 $15 - x + x = 5 + 4x + x$   
 $15 = 5 + 5x$   
 $15 - 5 = 5 + 5x - 5$

$$10 = 5x$$

$$\frac{10}{5} = \frac{5x}{5}$$

$$2 = x$$

$$y = 15 - x$$

$$y = 15 - 2$$

$$y = 13$$

The smoke is at point  
(2, 13)

Check

$$y = 5 + 4x$$

$$13 = 5 + 4(2)$$

$$13 = 5 + 8$$

$$13 = 13$$

See other page for  
 6, 7 →

p42 + 43  
 #9

$$y = 10 + 2x$$

$$y = -8 + 2x$$

These lines will not intersect ever because they have the same slope and are parallel.

#10  $y = -5 + 8x$   
 $y = 5 + 7.5x$

A The lines are not parallel because their slope is not exactly the same. You can tell by doing the problem.

B  $-5 + 8x = 5 + 7.5x$   
 $-5 + 5 + 8x = 5 + 5 + 7.5x$

$$8x = 10 + 7.5x$$

$$8x - 7.5x = 10 + 7.5x - 7.5x$$

$$.5x = 10$$

$$x = 20$$

$$y = -5 + 8x$$

$$y = -5 + 8(20)$$

$$y = -5 + 160$$

$$y = 155$$

Point of inter. (20, 155)  
 sections

# Graphing Equations

p42

#6  $y = 5 + x \rightarrow$  Tower B  
 $y = 5 + \frac{1}{4}x \rightarrow$  Tower A  
 $5 + x = 5 + \frac{1}{4}x$   
 $5 + x - x = 5 + \frac{1}{4}x - x$   
 $5 = 5 + \frac{1}{4}x$   
 $5 + 5 = 5 + 5 + \frac{1}{4}x$   
 $10 = \frac{1}{4}x$   
 $40 = x$   
 $y = 5 + x$   
 $y = 5 + 40$   
 $y = 45$

p43

#7 Point of Intersection (40, 45)  
 $y = 15 + 2x$   
 $y = 5 + 3x$   
 $15 + 2x = 5 + 3x$   
 $15 - 5 + 2x = 5 - 5 + 3x$   
 $10 + 2x = 3x$   
 $10 + 2x - 2x = 3x - 2x$   
 $10 = x$   
 $y = 15 + 2(10)$   
 $y = 15 + 20$   
 $y = 35$

Point of I:

How to find from other tower?

(10, 35)  
 $x = -5 +$   
 $[10, 40]$   
 $\frac{x}{10} = \frac{40}{10} \Rightarrow \frac{4}{1} \Rightarrow 4$   
 $x = -5 + 4 \times 10$   
 $x = -5 + 40$   
 $x = 35$

From A:

$x = -5 + 40$   
 $x = 35$   
 See other page for 9, 10

p42+43

#11 #19, p21

A:  $e \rightarrow y = 3 + \frac{3}{2}x$   
 $m = p = 2x$

Do we need to show process?

B:  $y = 3 + \frac{3}{2}x$

Can we change to improper?

$y = 2x$   
 $3 + \frac{3}{2}x = 2x$   
 $3 + \frac{3}{2}x - \frac{3}{2}x = 2x - \frac{3}{2}x$   
 $3 = .5x$

yes

$6 = x$   
 $x = 2x$   
 $x = 2(6)$

$x = 12$

(6, 12) = Point of intersection

C: My answer was correct

Show  $y = mx + b$   
 $m = \frac{m \cdot x}{x}$   
 $b =$

Remember to do the x

(10, 35) Add  
 $(0, -5)$   
 $[10 - 0, 35 - (-5)]$   
 $[10, 40]$

# Graphing Equations

p44

#12  $y = 1 + 3x$

$y = -3 - 2x$

A:  $-3 - 2x = 1 + 3x$

$-3 + 3 - 2x = 1 + 3 + 3x$

$-2x = 4 + 3x$

$-2x - 3x = 4 + 3x - 3x$

$-5x = 4$

$\frac{-5x}{-5} = \frac{4}{-5}$

$x = -0.8$

B

$y = 1 + 3x$

$y = 1 + 3(8)$

$y = 1 + 24$

$y = 25$

$(-0.8, 1.4)$

Do your neg. correct

$[3, -5]$

$\frac{x}{3} = \frac{-5}{3}$

b =  $[0, -1]$

$y = \frac{-5}{3}x - 1$  Correct

$-\frac{8}{5}x + 3 = \frac{-5}{3}x - 1$

$-\frac{8}{5}x + 3 + 1 = \frac{-5}{3}x - 1 + 1$

$-\frac{8}{5}x + 4 = \frac{-5}{3}x$

$-\frac{8}{5}x + \frac{8}{5}x + 4 = \frac{-5}{3}x + \frac{15}{3}x - 1 + 15x$

$4 = -\frac{1}{15}x - \frac{5}{3} - \frac{25}{15}$

$4 = -3.26x$

$\frac{4}{-3.26} = \frac{-15x}{-15}$

$-60 = x$

$y = \frac{-5}{3}(-1.22) - 1$

$y = 2.03 - 1$

$y = 1.03$

Point of  $(-60, 99)$

$(-60, 99)$

$\frac{5}{13} \cdot \frac{100}{1} = 100$

Negative Again

Check this

#13

$y = mx + b$

$m = (0, 3)$

$(5, 5)$

$(0.5, 3 - 5)$

$(5, 8)$

$\frac{y}{x} = \frac{8}{5} = \frac{8}{5}$

b =  $(0, 3)$

$y = \frac{8}{5}x + 3$  Correct

$y = mx + b$

$m = (0, -1)$

$(-3, 4)$

$(0, -3, -1 - 4)$

Need this

Do need this

Correct

## Decision Making

# Decision Making

p2

12/8

#1. What would each group prefer?

A Conservationists

The conservationist would want single-family houses because there are more parks, empty space and open land. more animals, safer parks

B Store Merchants

The store people want more townhouses because more people living in townhouses give them more business, so they make more \$\$.  
- more room/bigger - tent top apartment

C Realtors

Realtors are like the store people more houses = more business. However, the single family house would sell for more \$, increasing the commission for selling the house.

# Decision Making

p3+4

12/9

#4 12,000 sq m - could 3 football fields fit? (100m x 50m)  
 - 1st find area (l x w)  $5,000 \text{ m}^2$   
 3 football =  $15,000 \text{ m}^2$

No you can't fit 3 football fields. You may be able to fit 2.

#5 Find l and w from  $12,000 \text{ m}^2$  and  $12,000 \text{ m}^2$

Not a square

~~Wrong~~  
~~Not a square~~  
~~12,000 m²~~  
~~4 equal sides~~  
~~3,000 m side~~

Many Combs  
 No 1 answer

120 x 100m

40m x 300m

30m x 400m

20m x 600m

60m x 200m

#16 See Student Activity, Sheet 1

#17 The teacher say he is almost correct. 120 houses fit, with space left over. 1m left over on each side of the house. The space you might not want 1m on each side of your house. You don't have a yard

#19

List: - Streets	- Yards	- Driveways	- Hospital ^{Place}
- Shops ^{Side walks}	- Schools ^{Place}	- Police	- Local, Gov. ^{Place}
- Parks/Fields	- Municipalty	- Fire	- Place of worship

# Decision Making

12/9

#9 600 sq m for a  $12 \times 8 m^2$

A For sidewalk, yard, trees, pools, shed

#10-On  $12,000 sq m$  total land available  
house has  $600 m^2$   
town house has  $400 m^2$  (10 t.h. =  $4,000 sq m$ )

Page 6

#10 H = 10 =  $600^{sq m}$  and T = 15 =  $400^{sq m}$

$$\begin{array}{r} a \quad 10 H \times 600 = 6000 \text{ sq m} \\ 15 T \times 400 = + 6000 \text{ sq m} \\ \hline 12,000 \text{ sq m} \end{array}$$

b Parkway	City Center	Both
has less units	more units	even amounts
		more of theres
		if compromise it is good

$$\begin{array}{r} c \quad 8 H \times 600 = 4800 m^2 \\ 18 T \times 400 = + 7200 m^2 \\ \hline 12,000 m^2 \end{array}$$

Yes the plan will work

d No, the plan will not work because the first has value of 600's, and the 2nd one has a value of 400's.

# Decision Making

pg 17

e A plan of (12, 12) will work.

Plan (H, T)	Area for H in m ²	Area for T in m ²	Total Area in m ²
(10, 15)	6000	6000	12000
(8, 18)	4800	7200	12000
(12, 12)	7200	4800	12000

page 7

12 The number represents the total at that point. It uses both the x and y axis values to get its value

$$13 \quad Q = \underset{\substack{\uparrow \\ 3000}}{5}H + \underset{\substack{\uparrow \\ 4000}}{10}T = \underline{7000 \text{ m}^2}$$

$$R = \underset{\substack{\uparrow \\ 9000}}{15}H + \underset{\substack{\uparrow \\ 6000}}{15}T = \underline{15000 \text{ m}^2}$$

14.A It works because with the houses would fit with extra room for parks etc.

14.B P, Q would work

15.A It would be 20 m

B It would be 30 m

C See Graph

$$D \quad 14,000 - 1200 = 2000 \quad + \begin{matrix} 12, 12 \\ 2, 2 \\ \hline 14, 14 \end{matrix}$$

$$1000 = H + T$$

$$2000 = 2H + 2T$$

# Making Decisions

p 7

## Plans for Development

# Decision Making

Her way

12/16

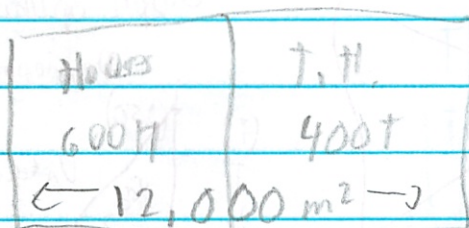

12,000 m² land

H → 600 m²

T → 400 m²

H = # of houses

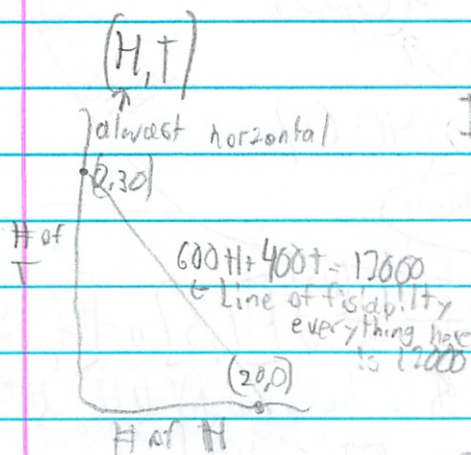

T = # of town houses

$$600H + 400T = 12000$$

If H = 0, then 400T = 12000

$$T = 30$$

If T = 0, then 600H = 12000

$$H = 20$$

For every 3 T lost, you get 2 H

Called slope and fair exchange

$$2H = 3T = 1200$$

Exchange 3 T for 2 H (Fair Exchange)

All plans adding exact 12,000

(0, 30)	(8, 19)	(16, 6)
(2, 27)	(10, 15)	(18, 3)

## Homework

2x

Facts

28000 m² total

700 m² house

400 m² townhouses

Definition

H = # of houses (H, T)

T = # of townhouses

Equation

$$700H + 400T = 28000$$

If H=0, then 400T=28000

$$T = 70 \rightarrow (0, 70)$$

If T=0, then 700H=28000

$$H = 40 \rightarrow (40, 0)$$

Fair Exchange

Slope  
Direction

House  $\rightarrow 700 \text{ m}^2 \rightarrow \times 4 \rightarrow 2800$

Townhouses  $\rightarrow 400 \text{ m}^2 \rightarrow \times 7 \rightarrow 2800$

4 Houses = 7 townhouses

$$\frac{H}{4} = \frac{T}{7} \text{ or } \frac{T}{4}$$

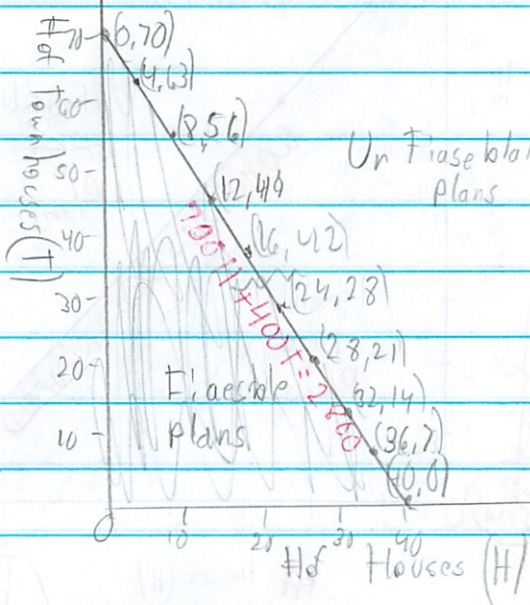

$$\boxed{4, 7} \text{ or } \boxed{4, 7}$$
